CORONATION ACTIVE INCOME PLUS FUND

Fund Information as at 30 April 2024

CORONATION
TRUST IS EARNED™

WHAT IS THE FUND'S OBJECTIVE?

Active Income Plus aims to provide investors with a higher total return than traditional short duration income funds over the medium term.

WHAT DOES THE FUND INVEST IN?

Active Income Plus Fund can invest in a wide variety of yielding assets, such as cash, government and corporate bonds, inflation-linked bonds and listed property, both in South Africa and internationally.

The fund's effective exposure to property and equities is typically limited to a maximum of 10%. Total exposure to international assets will typically be limited to 25% (on both an effective exposure and SARB offshore asset capacity basis).

The fund has a flexible mandate with no prescribed maturity or duration limits for its investments or for the portfolio as a whole. The fund is mandated to use derivative instruments for efficient portfolio management purposes and can invest in other collective investment schemes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

3/10
Conservative

Maximum growth/
minimum income exposures

Growth Assets: 10%
Income Assets: 90%

Active Income Plus is tactically managed to secure an attractive return, while protecting capital over the medium term.

Its investments are carefully researched by a large and experienced investment team and subjected to a strict risk management process. The fund is actively positioned to balance long-term strategic positions with shorter-term tactical opportunities to achieve the best possible income.

While the fund is managed in a conservative and defensive manner, it will not always outperform short-duration income funds over short periods of time. Capital losses are possible, especially in the case of negative credit events affecting underlying holdings.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is 24-months and longer. The fund's exposure to growth assets like listed property and preference shares will cause price fluctuations from day to day, making it unsuitable as an alternative to a money market fund over very short investment horizons (12-months and shorter).

Given its limited exposure to growth assets, the fund is not suited as the sole holding for investment terms of longer than five years.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who

- are looking for a liquid alternative to medium-term fixed deposits (3-5 years);
- seek managed exposure to income generating investments;
- believe in the benefits of active management within the fixed interest universe;
- are looking for a conservatively managed fixed income building block for use as a component of a low to moderate risk multi-asset portfolio appropriate for funding income drawdown commitments

WHAT COSTS CAN I EXPECT TO PAY?

The annual management fee is 0.75%.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other fund costs.

We do not charge fees to access or withdraw from the fund.

More detail is available on www.coronation.com.

Performance and fund positioning

The Fund returned 0.23% in March, bringing its year-to-date total return to 1.46%, lagging cash (2%) and its benchmark (2.06%) over the same period. This is a new fund, launched in November 2023, with a return objective of producing at least cash + 2% return objective over the medium to longer term.

Markets started 2024 intoxicated with the euphoria of the Federal Reserve Board's (Fed) impending monetary policy pivot. Risk assets rode high on the wave of optimism for most of the first quarter (Q1-24), with emerging markets doing especially well. Unfortunately, as is generally the case, this optimism faded towards the end of the quarter, with the market's initial pricing of 175 basis points (bps) of rate cuts for 2024 tapering to the Fed's projections of only 75bps. South Africa (SA) has done little to positively differentiate itself from the rest of the emerging market (EM) basket. Uncertainty on the outcome of the local elections, possible coalitions and the policy implications thereof weighed on the performance of the rand and bonds, causing further underperformance relative to EM peers.

The FTSE/JSE All Bond Index (ALBI) was down -1.8% over the quarter, driven by its poor performance in February and March, as bond yields rose by close to 100bps, inching closer to the highs last seen during the Covid crisis. Most of this poor performance was driven by the performance of the long end of the yield curve (>12 years). Inflation-linked bonds (ILBs) performed slightly better, returning -0.37%, as elevated real yields and stubborn inflation continued to help the asset class. However, over the last 12 months, both the ALBI's (4.19%) performance and that of ILBs (5.74%) remain significantly behind cash (8.15%). Given that the rand was also down c.4.69% versus the US dollar over the last 12 months, SA bond performance translated to dollars would have fared only marginally better than global bond performance over the same period (FTSE World Government Bond Index [WGBI] was down -0.84% in US dollars).

In emerging markets, China's headline inflation increased to 0.7% year on year (y/y) from a deflation of 0.8% y/y in January. The inflation uptick was driven by holiday-related demand associated with Lunar New Year celebrations. Food price deflation slowed, and travel costs increased by 23.1% y/y in February from 1.8% y/y in January. The Producer Price Index, which tends to be less impacted by Lunar New Year celebrations, fell 2.7% y/y in February from a contraction of 2.5% y/y in January.

The rand ended the month at R18.67/US$1. SA's idiosyncratic problems and the turn in global risk sentiment continued to weigh on the ZAR. Offshore credit assets and certain developed market bonds continue to flag as relatively attractive. The Fund has utilised a significant part of its offshore allowance to invest in these assets. When valuations are stretched, the Fund will hedge/unhedge portions of its exposure back into rands/dollars by selling/buying JSE-traded currency futures (US dollars, UK pounds, and euros). These instruments are used to adjust the Fund's exposure synthetically, allowing it to maintain its core holdings in offshore assets.

In SA, the economy expanded by 0.1% quarter on quarter (q/q) in the fourth quarter of 2023 from a contraction of 0.2% q/q in the third quarter of 2023. From the production side, mining and manufacturing production increased while agriculture, construction and domestic trade declined. On the expenditure side, household consumption and inventory accumulation increased, but this was offset by weak net trade, reduced government expenditure, and a decline in gross fixed capital formation. Overall, the economy grew by 0.6% in 2023 from a growth figure of 1.2% in 2022.

The South African Reserve Bank (SARB) unanimously voted to leave the repo rate unchanged at 8.25% at the March MPC meeting. The MPC cited sticky inflation and elevated inflation expectations as the main reasons for keeping the repo rate unchanged. Food inflation has been on a decline, but there is concern that prices could rebound following reports of damage to the summer crops due to dry and hot weather conditions. The SARB slightly updated headline inflation to 5.1% from 5.0% for 2024 and left its projections unchanged for 2025 and 2026 at 4.6% and 4.5%, respectively.

Headline inflation increased to 5.6% y/y in February from 5.3% y/y in January while core inflation ticked up to 5.0% y/y from 4.6% y/y. The increase in inflation was driven by higher medical aid insurance tariffs, and an uptick in service inflation. Food inflation slowed down due to base effects, while transport costs increased on the back of high fuel prices. Elsewhere, prices were generally soft with modest gains in apparel, household services, restaurants, and hotels.

As at the end of December 2023, the market was pricing that the SARB's Monetary Policy Committee would cut the repo rate by 75bps by the end of 2024, but recent pricing suggests that the repo rate will remain unchanged until the end of 2025. Market expectations for inflation are for it to average 4.5% in 2025, which implies a real repo rate of c.3.5% for most of the forecast period. We expect inflation to remain stickier and average 5.4% in 2025. Our stickier inflation forecasts are all supply-side based due to higher food prices driven by the effects of El-Niño, a weaker rand translating into higher imported inflation and the higher cost of doing business in SA as a consequence of inadequate network infrastructure. However, as we have previously argued, with real growth struggling to break above 1.5%, policy settings could be regarded as excessively restrictive and as such, we would view a reduction in the policy rate of 0.5%-0.75% starting in November 2024. This would still maintain a real policy rate of 2.0% based on our inflation forecasts.

At the end of March, shorter-dated fixed-rate negotiable certificates of deposit (NCDs) traded at 9.17% (three-year) and 9.82% (five-year), higher compared to the end of the previous month. Our inflation expectations suggest that the current pricing of these instruments remains attractive due to their lower modified duration and, hence, high breakeven relative to cash. In addition, NCDs have the added benefit of being liquid, thus aligning the Fund's liquidity with the needs of its investors. The Fund continues to hold decent exposure to these instruments (fewer floating than fixed), but we will remain cautious and selective when increasing exposure.

The significant reduction in rate cut expectations over the last quarter has tainted the enthusiasm for risk assets. However, the monetary policy pivot remains in play and, as such, emerging markets should continue seeing supportive flows into their markets. Idiosyncratic SA factors have led to further underperformance of SA assets relative to the peer group. Low growth, sticky inflation and burgeoning deficits will continue to weigh on SA's longer-term outlook unless reform implementation is accelerated through increased private sector participation. SA's bond yields remain elevated but still provide an attractive alternative to cash, given their high embedded risk premium. We would advocate slightly overweight positions in bond portfolios, focused on maturities of less than 12 years, together with decent allocation to sub-10-year maturity ILBs and very little allocation to local credit.

ILBs are securities designed to help protect investors against inflation. They are indexed to inflation so that the principal amount invested and, hence, the interest payments rise and fall with the inflation rate. ILBs have offered protection to investors over the last quarter. However, current breakeven inflation across the ILB curve averages between 5.5% and 6.0%, which is well above even our own expectations for inflation over the medium term. It is only the shorter-dated ILBs (I2029, six years to maturity and I2033, 9 years to maturity) that flag as cheap from a valuation perspective. Risks on the inflation front remain elevated, and these shorter-dated ILBs warrant a decent allocation within portfolios due to their inherent inflation protection.

The local listed property sector was down 1.02% over the month, bringing its 12-month return to 20.47%. Operational performance will remain in the spotlight as an indicator of the pace and depth of the sector's recovery. The current poor growth outlook, combined with an increase in cost base due to higher administered prices and second-round effects on loadshedding, will weigh on the sector's earnings in the coming year. We believe that one must remain cautious due to the high levels of uncertainty around the strength and durability of the local recovery.

Corporate credit is an incredibly effective tool that can be used to enhance the yield and longer-term performance of fixed income portfolios. However, it is important to understand that yield is earned over a multiyear investment horizon, and a long-term focus is essential when analysing and investing in the asset class. Managing credit risk is broader than just focusing on the specifics of an individual lender. Instead, we must consider the incremental risk that a corporate credit adds to a portfolio in relation to its overall risk profile and the effect on portfolio liquidity and then ensure that positions are sized correctly.

Low levels of issuance and tightening spreads have created a guise of safety when it comes to investing in the local credit markets. SA credit remains an illiquid market that necessitates detailed scrutiny of underlying fundamentals and relative attractiveness, especially within a deteriorating macroeconomic environment like SA.

We believe that allocating significant amounts of capital to the local credit market is unwise and would represent a substantial opportunity cost in the face of attractive valuations in other, more liquid asset classes. The current level of credit spreads on offer are at historically compressed levels, despite SA being in its weakest economic position. Corporate profitability and creditworthiness are inevitably tied to economic outcomes, with significant polarisation in performance. SA is a sub-investment grade economy; thus, local credit should trade at high yield spreads. However, SA trades as an investment-grade issuer. The only spreads that trade at the high yield equivalent are riskier issuances coming from taxi financing, subordinated tranches of securitisations and bank debt. This also shows how much better the value is in offshore credit, which offers higher credit quality and better diversity at much more attractive valuation levels.

The use of structured products, such as credit-linked notes (CLNs), has become ubiquitous within the local market. This sector of the market has grown exponentially over the last five years and has reached a market size of over R100 billion, but only a third of this market reprices, creating an inaccurate representation of asset volatility and pricing. CLNs mask the underlying/see-through credit risk as the issuing entity (predominantly local banks) is seen as the primary credit risk. The increased usage of CLNs has not expanded the pool of borrowers; instead, it has only served to concentrate it. This is due to the ability to limit the volatility of these instruments through not marking them to market[1] based on the underlying asset price movements. This is why CLN repacks of SA government bonds have become so popular over the last five years. The combination of attractive yields and no volatility is an opportunity that not many would pass up unless, of course, pricing transparency is important to the underlying investor. As a result, there can be significant unseen risks within fixed income funds. Investors need to remain prudently focused on finding assets of which the valuations are correctly aligned to fundamentals and efficient market pricing.

Outlook

We remain vigilant of the risks from the dislocations between stretched valuations and the local economy's underlying fundamentals. However, we believe that the Fund's current positioning correctly reflects appropriate levels of caution. The Fund's yield of 10.4% (gross of fees) remains attractive relative to its duration risk. We continue to believe that this yield is an adequate proxy for expected Fund performance over the next 12 months. As is evident, we remain cautious in our management of the Fund. We continue to invest only in assets and instruments that we believe have the correct risk and term premium to limit investor downside and enhance yield.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION ACTIVE INCOME PLUS FUND

Unit trusts should be considered medium- to long-term investments. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest a portion of its portfolio (typically up to a maximum of 25%) into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. The asset allocation by instrument type are reflected on a look-through basis. The asset allocation by issuer type and top issuer exposures are not reflected on a look-through basis. The yield shown is an estimate in part based on market assumptions and forecasts. The yield is calculated by taking the interest and income receivable of all the instruments in the fund divided by the net asset value, expressed as a nominal annual rate. It is provided to give an approximate indication of the achievable yield for an investment made at the reporting date. Actual experience may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period. The yield disclosed on the MDD is current and calculated as at the MDD reporting date.

Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

As this is a new fund the fact sheet does not include performance information yet. Once performance information is available the following will apply:

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

The TER and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product. Calculations are based on actual data where possible and best estimates where actual data is not available.

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio over the period referenced. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the underlying fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the previous financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last available quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
